## IN THE CLAIMS

The status of claims in the case is as follows:

1 1. [Currently amended] A system using an on-line 2 data gathering tool for developing a general procurement and accounts payable application, comprising: 3 4 a server; 5 a storage device connected to said server; 6 a plurality of team terminals; 7 a communication link interconnecting said server and 8 said terminals; said server being operable for (1) maintaining a 9 10 database of templates describing procedures for developing said application on said storage device and 11 12 (2) serving said templates to enterprise and customer 13 team members operating said terminals for coordinating, 14 recording and tracking team activities with respect to 15 said application.

- 1 2. [Original] The system of claim 1, each said
- 2 template storing, either directly or by way of links to
- 3 other documents, materials for guiding, coordinating and
- 4 documenting the work of said team members.

## 3-35. [Canceled]

- 1 36. [New] A system using an on-line data gathering tool
- 2 for developing a general procurement and accounts payable
- 3 application, comprising:
- 4 a server;
- 5 a storage device connected to said server including a
- 6 database of templates initially configured as a generic
- 7 general procurement and accounts payable application;
- 8 a plurality of team terminals including a service
- 9 provider team terminal and a customer team terminal;
- a communication link interconnecting said server and
- said terminals;

12 first server means for serving to said terminals from said database of templates task templates for project 13 14 design and development of assessment, business 15 controls, configuration, education, image, information 16 technology, marketing, process, project management, 17 requisition and catalog, accounts payable accounting 18 and transition tasks: 19 second server means for receiving from said service 20 provider team terminal and said customer team terminal 21 development adaptations to said task templates; 22 third server means for adapting said task templates 23 initially configured as a generic general procurement 24 and accounts payable application into a customer 25 specific general procurement and accounts payable 26 application; and 27 fourth server means for implementing said general 28 procurement and accounts payable application.

37. [New] The system of claim 36, each said template storing, either directly or by way of links to other documents, materials for guiding, coordinating and

- 4 documenting the work of said team members.
- 1 38. [New] A method for using an on-line data gathering
- tool for developing a general procurement and accounts
- 3 payable application, comprising:
- 4 initially configuring in a storage device connected to
- 5 a server a database of templates as a generic general
- 6 procurement and accounts payable application;
- 7 interconnecting said server with a plurality of team
- 8 terminals including a service provider team terminal
- 9 and a customer team terminal;
- 10 serving to said terminals from said database of
- 11 templates task templates for project design and
- development of assessment, business controls,
- 13 configuration, education, image, information
- technology, marketing, process, project management,
- requisition and catalog, accounts payable accounting
- 16 and transition tasks;
- 17 receiving from said service provider team terminal and
- said customer team terminal development adaptations to

19 said task template	es,	;
-----------------------	-----	---

- adapting said task templates initially configured as a
  generic general procurement and accounts payable
  application into a customer specific general
  procurement and accounts payable application; and
  implementing said general procurement and accounts
  payable application.
- 39. [New] A program storage device readable by a
  machine, tangibly embodying a program of instructions
  executable by a machine to perform operations for using an
  on-line data gathering tool for developing a general
  procurement and accounts payable application, said
  operations comprising:
- initially configuring in a storage device connected to a server a database of templates as a generic general procurement and accounts payable application;
- interconnecting said server with a plurality of team
  terminals including a service provider team terminal
  and a customer team terminal;

serving to said terminals from said database of templates task templates for project design and development of assessment, business controls, configuration, education, image, information technology, marketing, process, project management, requisition and catalog, accounts payable accounting and transition tasks;

receiving from said service provider team terminal and said customer team terminal development adaptations to said task templates;

adapting said task templates initially configured as a generic general procurement and accounts payable application into a customer specific general procurement and accounts payable application; and

implementing said general procurement and accounts
payable application.

1 40. [New] A computer program product or computer
2 program element for using an on-line data gathering tool for
3 developing a general procurement and accounts payable
4 application according to operations comprising:

5	initially configuring in a storage device connected to
6	a server a database of templates as a generic general
7.	procurement and accounts payable application;
8	interconnecting said server with a plurality of team
9	terminals including a service provider team terminal
10	and a customer team terminal;
11	serving to said terminals from said database of
12	templates task templates for project design and
13	development of assessment, business controls,
14	configuration, education, image, information
15	technology, marketing, process, project management,
16	requisition and catalog, accounts payable accounting
17	and transition tasks;
18	receiving from said service provider team terminal and
19	said customer team terminal development adaptations to
20	said task templates;
21	adapting said task templates initially configured as a
22	generic general procurement and accounts payable
23	application into a customer specific general

24	procurement and accounts payable application; and
25 26	implementing said general procurement and accounts payable application.

- 1 41. [New] A system using an on-line data gathering tool
  2 for developing a general procurement and accounts payable
  3 application, comprising:
- means for initially configuring in a storage device
  connected to a server a database of templates as a
  generic general procurement and accounts payable
  application;
- means for interconnecting said server with a plurality
  of team terminals including a service provider team
  terminal and a customer team terminal;
- means for serving to said terminals from said database

  of templates task templates for project design and

  development of assessment, business controls,

  configuration, education, image, information

  technology, marketing, process, project management,

10	requisition and catalog, accounts payable accounting
17	and transition tasks;
	•
18	means for receiving from said service provider team
19	terminal and said customer team terminal development
20	adaptations to said task templates;
21	means for adapting said task templates initially
22	configured as a generic general procurement and
23	accounts payable application into a customer specific
24	general procurement and accounts payable application;
25	and
26	means for implementing said general procurement and
27	accounts payable application.
